*For follow up information, please contact the Department of Management Services, who manages private prison contracts.

Please note: Inmates move in and out of security quarantine, medical quarantine and medical isolation on a continual basis, based on direction from FDC health services staff. These statistics are updated every day and are a snapshot of the situation at the time information was reported. Changes in these statistics that occur later the same day will be reflected in the next daily update.

Security Quarantine column refers to the number of inmates who have been separated because they have been recently transferred to the correctional facility. These inmates are asymptomatic and entering the facility from outside court, a community/work release center, county jail, etc. Security quarantine is a precautionary measure. Medical staff monitor these inmates to ensure no inmates show symptoms of illness. At the conclusion of security quarantine, inmates are moved to the general population.

Medical Quarantine column refers to the number of inmates who have been separated because they have had close contact with a person who has tested positive or exhibited symptoms of an infectious illness, to determine whether they develop symptoms. All inmates in medical quarantine are monitored by health services staff and receive temperature checks twice a day for signs of fever. If an inmate begins experiencing symptoms indicative of COVID-19, FDC will place the inmate in medical isolation and immediately engage the county health department.

Medical Isolation column refers to the number of inmates who have been separated because they are suspected or presenting symptoms of an infectious illness. To prevent contact with others and reduce the risk of transmission, these inmates are placed in medical isolation and are tested for COVID-19.

Pending column refers to the number of inmates who have been administered a COVID-19 test and are waiting for results. These inmates are either in medical isolation or medical quarantine.

Negative column refers to the number of inmates who have been administered a COVID-19 test and have received a negative result. These inmates are placed in an appropriate housing status based on their care and custody requirements.

Positive column refers to the number of inmates who have been administered a COVID-19 test and have received a positive result. These inmates are in medical isolation and under the care of their treating clinician. All inmates are receiving the appropriate level of care based on their individual treatment needs. This could include inmates who are being treated by an outside medical provider. These inmates will remain in medical isolation until they are recovered. Once recovered, these inmates will be moved into appropriate housing based on their care and custody requirements.

FDC has 145 facilities statewide, including 50 correctional institutions, seven private partner facilities, 17 annexes, 34 work camps, three re-entry centers, 12 FDC-operated work release centers, 18 private work release centers, two road prisons, one forestry camp and one basic training camp.

Information on Testing

FDC's testing priorities closely align with recommendations from the CDC and current treatment protocols established by the Florida Department of Health.

If an inmate begins experiencing symptoms indicative of COVID-19 they will be placed in medical isolation. All inmates in medical isolation are tested for COVID-19 and are monitored by health services staff.

Sample testing of asymptomatic inmates in medical quarantine that are elderly, have a compromised immune system and/or preexisting medical condition are being conducted.
